While Photoshop is a powerful and feature-laden image editing program, it's not really that user-friendly. And, for those just learning the software it can be a little intimidating. The purpose of this guide is to teach you how to use Photoshop Elements, in a step-by-step way, by tackling problems and learning shortcuts that will help you make your images look their best. Quick Start Guide You should learn a new skill, even if you're already using this software. If you're starting from scratch, or would like a refresher, this guide will take you from a non-Photoshop-user to someone who can edit, resize, convert, and save images using Photoshop Elements. How to Resize Images Imagine that you've been tasked with creating an image for a magazine, newsletter, or online publication. A good rule of thumb is to create large, high-resolution images, and then "fit" them to the dimensions you need. This means that you need to know the size of the image you need to make, and then resize the image so it's the exact size you want. There are two basic ways to do this. 1. Select the Image Open the image you want to resize in Photoshop Elements. Click the File menu > Open to open it. Click the Scale icon at the bottom of the screen to go to the Image Size dialog box. Click the arrow next to Image Size to open a menu. Click the size you want to change the image to. If you want to resize the image to

a new size, you want to change it to Original or Fit Image. You can also change the image to its original size by selecting to change the size to Original. 2. Change the Image Size Some images are already sized correctly for you. If that's the case, you don't need to open the image. Simply click the New Size button (or press Enter on the keyboard) to get the same results as method 1. Manually Fit Images If the image you want to resize isn't already sized correctly, or if you'd like to resize the image in a different size than what the original image is already sized at, you have to resize it manually. This is done in the dialog box.

The effect of movement on pharmacokinetic parameters of morphine during PVA-sclerotherapy in patients with chronic venous insufficiency of the lower limb. Although opioids are often prescribed for relief of chronic venous insufficiency, there are no data available to estimate the time needed to achieve maximum plasma concentrations after systemic administration of such drugs. The primary objective of the present study was to measure the effect of movement on the pharmacokinetic parameters (the time of maximum concentration and area under the concentration-time curve) of morphine in patients with chronic venous insufficiency. A secondary aim was to study the effect of movement on the time of return to pre-movement values of pharmacokinetic parameters. This is a prospective, longitudinal, single-blinded, sequential cohort study of 23 women and 13 men, aged 26-92 years, with chronic venous insufficiency, who underwent to a transluminal obliteration of the main veins of the lower limb. Morphine was administered at a dose of 2 mg/ml via a catheter with a balloon distal to the knee. The patients had identical procedures but in two different (off and on movement) phases. We calculated the pharmacokinetic parameters for plasma morphine and morphine-6-glucuronide based on the concentration-time data. The area under the concentration-time curve was significantly higher on movement than off movement, the mean area was 132.5 (SD 29.7) ng/ml.c vs. 117.9 (27.9) ng/ml.c, respectively. The time of maximum concentration was significantly longer on movement, the mean time of maximum concentration was 1.37 (0.52) hours vs. 1.08 (0.35) hours, respectively. Morphine concentration-time data suggest that movement may prolong the time of maximum concentration and increase the area under the concentration-time curve of morphine. Q: Why does this trigger get ignored in if, but fine in a loop? Q: Android: Render HTML in TextView Hello I want to display a html string in my Android app's TextView but my app's text is rendered differently than the usual TextViews, the colors are ugly, so I want to use a TextView to render the HTML string. I can get the HTML string using: String text = "Hello WebKit" and then SpannableString htmlString = (SpannableString) Html.fromHtml(text); to create a SpannableString so how do I put the htmlString to the TextView? Because I set the text of the TextView like this: textView.setText(str); A: I didn't know how TextViews worked, and that's why I was confused when this didn't work. Here is how it's done: String html = "Hello WebKit" textView.setText(Html.fromHtml(html)); [Voltagegated potassium channel alpha 1 subunit gene expression in rat hippocampus]. To study voltage gated potassium channel alpha 1 subunit gene expression in rat hippocampus. We utilized quantitative RT-PCR to determine the relative expression level of the channel alpha 1 subunit mRNA in rat hippocampus. In situ hybridization was utilized to determine the expression of the channel alpha 1 subunit gene in rat hippocampus. Quantitative RT-PCR showed that the expression of the channel alpha 1 subunit gene was higher in hippocampus than in other brain regions (brainstem and cerebellum). In situ hybridization showed that the channel alpha 1 subunit gene was expressed in the pyramidal layer of hippocampus. Voltage gated potassium channels are expressed in hippocampus. The channel alpha 1 subunit gene may be involved in neuronal signal transduction in hippocampus. A New Jersey man was sentenced on Tuesday to two years in prison for attacking protesters while filming them outside a Donald Trump rally last September in New York City. Jurors last month convicted Daryl Davis, 31, of attempted gang assault and criminal mischief after he was filmed, repeatedly punching and kicking three protesters while wearing a "Make America Great Again" hat and a Trump mask. Prosecutors said Davis, an amateur Trump supporter, didn't know the men were journalists covering a protest. On Tuesday, U.S. District Judge William
