Xref (XRef: interchange) is an acronym for Exchange Reference, a company that developed an XML-based standard file format for the AutoCAD drawing exchange format. In 2007, Autodesk announced the "Open Architecture Program" (OAP) with its "Open Architecture Exchange Protocol" (OAE) specification. The motivation was to develop a common API for applications and products. The Open Architecture Exchange Protocol is a file format specification that facilitates interoperability between applications and products. The data in an OAE file is in XML format. File formats Autodesk supports two types of interchange formats for its products: Autodesk Exchange Format (XREF) is the basis for the AutoCAD Drawing Exchange Format, a new export format introduced with AutoCAD 2015. It is a binary format that includes a collection of 32-bit value pairs that represent component attributes. DXF is a binary format for CAD systems, used for Autodesk products, that uses the same naming conventions as the PostScript graphics format. Autodesk's software products and many third-party products support other exchange formats. In a prior art solid-state image sensor, a plurality of photodiodes are arranged to form a pixel, a plurality of vertical charge transfer registers (vertical CCD's) are arranged to be driven by a vertical driving circuit, and horizontal driving circuits and CCD's for transferring signal charges from the vertical charge transfer registers are arranged. An example of the solid-state image sensor is shown in FIG. 6. Referring to FIG. 6, a photodiode 1 is formed by diffusing p-type impurities to form an n.sup.+ region 2 on an n.sup.- substrate 3, and a p-well 4 is formed by diffusing p-type impurities on a surface of the n.sup.- substrate 3, and a voltage of about 5 V is applied to the p-
