## **Gearotic Motion V 4 7 127 VERIFIED**

gearotic motion is primarily a gear template generator. its true purpose is to create dxf's for further processing by various cad/cam programs. it has capabilities far beyond just creating dxf's though, it can produce 1:1 scale printouts for scrollsaw gear cutting, stl files for 3d printing, 3d solids for various cad usage, and finally g-code for users of programs such as mach3. in addition, it has a graphic simulation mode that allows the user to think about how to make a device, or determine other factors he may want to consider. it will provide some statistics about gear ratio's, sizes, centering and such and is a fun, easy to use mode that is virtually drag and drop for mechanism creation. there are plenty of videos available showing how to use the program as well as a help file to explain some of the terminology used. gearotic can at this point allow you to drag and drop various gears on your screen, simulate their rotation and show ratio information and such.. add pendulums and escapements if your making a clock, or various gear types if making a transmission. it can even design a tabbed box with shaft bearing holes to hold your device. ive had a lot of fun designing and building it and i suspect those who try it will find it as addictive as many others have. i'm excited to announce the release of the newest version of gearotic motion. this latest version has a few new features which should make for some interesting upgrades in the workflow of your gear cutting projects. gearotic motion is a 3d cad / cam software that allows you to design a variety of gear cycles.this software was initially designed only to provide ready-made gear molds, but gradually became a complete software package for developing a variety of 3d gears.gearotic software can create gears individually or by combining several types to create a moving gear system.

## **Gearotic Motion V 4 7 127**

gearotic is a cad/cam 3d software package aimed to assist with your geared mechanical creations. it was primarily designed as a gear template generator, but developed into a utility package we hope you'll find useful. gearotic will generate

---

gears individually or combine them to create a moving gear train. software allows you to simulate, animate, create toolpaths for cnc mode or iexport as 3d models. inside, youll find a variety of gear types such as spur, cage, non circular, planetary gears, sprocket, timing pulley, bevel, root blower, geneva, racks,

---

escapements and more. our spur gears may be done in a helical or bevel form which can then be outputted in straight, helix or zero formats. these outputs include stl files for 3d printing, 2d dxf format for most cad programs, 1:1 scale printouts for woodworking patterns or g-code for cnc users. gearotic motion has

---

grown over the years into multiple stand alone software programs. all of these programs require a personal computer or laptop to operate effectively. usually the faster/newer they are, likely the faster and better things will work for you too, always suggested you try the demo first.moving forward, as always, gearotic motion

---

aims to assist anyone with geared mechanical questions or ideas, all support and workshops is done from the above posted link of our gear head corner forum. gearotic is a cad/cam software tool for gear cutting, machine carving, and wire edm. gearotic allows you to create toolpaths for cutting gears from a dxf file, or cut gears

---

directly from a dxf file. it also provides a dxf plotter interface for printing toolpaths. a preview window is provided to show the placement of the cut toolpath as you place the workpiece on the worktable. the preview window includes an overlay that shows the cutting path and the names of the cutters. you can cut

---

# over 100 gears simultaneously. 5ec8ef588b
