U.S. intelligence officials are investigating the possibility that the militant group al-Qaida has recruited a key member of the C.I.A.'s bin Laden unit, according to current and former American officials. The C.I.A. operative is under scrutiny for an alleged role in Mr. bin Laden's death at a compound in Pakistan and for possible contacts with operatives for the Qaeda leader in Syria and elsewhere in the Middle East, according to American officials. ...Does the serotonin 1A receptor agonist buspirone differentially modulate basal and stress-induced levels of corticotropin-releasing hormone and its mRNAs in the paraventricular nucleus of the hypothalamus of the rat? Serotonin 1A (5-

HT1A) receptor agonists reduce the excessive release of corticotropin-releasing hormone (CRH) in the paraventricular nucleus (PVN) during stress. However, few reports address the effect of the administration of 5-HT1A receptor agonists on basal CRH release in the PVN. The aim of the present study was to investigate the effect of the administration of the 5-HT1A receptor agonist buspirone on basal and stress-induced levels of CRH and its mRNAs in the PVN of the rat. The experiments were performed on male rats under basal conditions and after a 3-h restraint stress. Buspirone was administered intraperitoneally 30 min before restraint. The PVN was microdissected out for the determination of CRH and preproCRH mRNA levels. Buspirone significantly decreased stress-induced increases in serum corticosterone. The baseline CRH-like immunoreactivity and mRNA levels in the PVN of buspirone-treated rats were significantly lower than those of vehicle-treated rats under basal conditions. However, buspirone had no effect on the stress-induced increases in CRH and preproCRH mRNA levels in the PVN. These results indicate that buspirone does not seem to reduce the stress-induced increase in CRH and preproCRH mRNA levels in the PVN, but may have an inhibitory effect on the basal release of CRH in the PVN of rats.

Japan's mobile phone industry is in trouble. The once mighty mobile phone giant, behind the iPhone and most smartphones, is now mired in a deep financial crisis. The key culprit is the rise of Android, a rival to iOS that has taken the market by storm. The crisis is something of a miracle, considering that Android is a free operating system, built on the open-source Linux kernel
