Here is the design made using Adobe Photoshop. It is a 100% creative infographic. It would be great to see you as an idea generator in my blog, please contact me in the link below with any questions. Since I bought my first copy of Photoshop in 1992 and since the release of Photoshop Lightroom in 2008 I have always felt I needed to do a review for each version. Up until the release of PS CS5.5 I did a negative review because the UI, or user interface, felt cumbersome to use. The UI has changed a lot since then though and in Lightroom I have found it easier to work with in many ways. I have however since then felt that Photoshop is too heavy and the learning curve is too steep. There are a few other concerns as well. If you have Photoshop CC, CS5.5 is the latest version you can use. Lightroom seems to be a natural fit for photo editing and development. Photoshop is still strong in print. It has the tools and controls required for very high quality printing and graphics. To illustrate how I use both Photoshop and Lightroom I have made this image as a proof of concept. One such feature is the **Camera preset suggestions**, a new set of initial camera settings (aka "cameras") generated for a photo. You can preview the suggestions as you're about to take a photo or after, and select the one you want, rather than have to login to your Google account or another site to select the one you want to have used. These are sometimes called "scenes" or "experiences". You select from the library all "scenes" or "experiences" that have preset exposure, hold, focus, white balance and other settings necessary for the effect you want. You then apply the scene or experience and when you're done, you export the image into a format that's compatible with whatever is hosting the experience (in my case, Adobe, as an example, is giving away a free version of its products to galleries and people can download them for free; such as this review. Adobe is not endorsing or encouraging piracy of its products, however. I could have purchased the software and gotten the benefits of this review as a thank you. Adobe Elements is a free product; the "Free for Non-Profits" version is for groups that create primarily digital content for use by non-profits such as museums, businesses, schools, governments and churches. I'm not a non-profit.

Universal Photoshop CC 2018 is a complete software solution for all your creative and innovative needs. It offers some of the best Photoshop tools, offering options to develop from photo editing to processing. This new platform enables me to test it out with some of the features coming in Photoshop CC which are supposed to be Unity based and will be a desktop application only. I am loving the interface change. I am also really looking forward to letting the AI make some of the decisions on my photo. I will test out Sharpening (+0.2) - really loving the new presets and ease of use. I am looking forward to getting my hands dirty with Brush Masking and Content Aware fills. For years, people have relied on desktop software to edit, shape, and work with their images and designs, but the revolution has come into the digital world. Now, you can easily touch up images on any device – from the Mac to iPhones, Android phones, iPads, Chromebooks, and even Windows computers – with the power of Photoshop on the internet. The all-in-one web-based version of Photoshop, Photoshop Express, is available on iOS, Android and Windows devices, making it easier for users to create, edit and share via a web browser, on the go. “We’re taking a big step forward in the world of digital images – one that allows the creative process to be more streamlined. The addition of innovative features like Adobe Sensei and the one-click Delete and Fill tool allows Photoshop to be more intelligent and makes editing projects faster. Users can share for review, collaborate on both web and desktop both in the cloud and locally, and work on projects on screen and any of the devices they have with them,” explained John Melton, product management director, Digital Imaging. “With the new web-based Photoshop, users can access the world of creative inspiration from anywhere with the touch of a mouse. Adobe is committed to creating a world-class creative community, and we’re excited to be bringing state-of-the-art technology to so many creators across the globe.” As more devices are connecting to the internet and accessing the cloud, Photoshop is becoming a mainstay of picture editing across platforms. In the last few years, Photoshop has been reinvented as a design tool as well as a photo retouching tool, and to keep up with today’s user expectations, Adobe is taking a big step forward with a new web-based version of the industry-leading desktop application. Share for Review, which enables users to work on projects safely and efficiently together, completely replaces the major vector image groupings of layers. Users can also observe changes made by others, comment on proposed edits, and share for review images, even larger files, on any device connected to the internet.
